Element.after()

The **Element.after()** method inserts a set of [Node](#) or string objects in the children list of the `Element`'s parent, just after the `Element`. String objects are inserted as equivalent [Text](#) nodes.

Syntax

```
after(node1)
after(node1, node2)
after(node1, node2, /* ... */ nodeN)
```

Parameters

`node1`, ..., `nodeN`

A set of [Node](#) or string objects to insert.

Return value

None ([undefined](#)).

Exceptions

`HierarchyRequestError` [DOMException](#)

Thrown when the node cannot be inserted at the specified point in the hierarchy.

Examples

Inserting an element

```
let container = document.createElement("div");
let p = document.createElement("p");
container.appendChild(p);
let span = document.createElement("span");

p.after(span);

console.log(container.outerHTML);
// "<div><p></p><span></span></div>"
```

Inserting text

```
let container = document.createElement("div");
let p = document.createElement("p");
container.appendChild(p);

p.after("Text");
```

```
console.log(container.outerHTML);  
// "<div><p></p>Text</div>"
```

Inserting an element and text

```
let container = document.createElement("div");  
let p = document.createElement("p");  
container.appendChild(p);  
let span = document.createElement("span");  
  
p.after(span, "Text");  
  
console.log(container.outerHTML);  
// "<div><p></p><span></span>Text</div>"
```
