Math.round()

The **Math.round()** function returns the value of a number rounded to the nearest integer.

Try it

JavaScript Demo: Math.round()

```
1 console.log(Math.round(0.9));
2 // expected output: 1
3
4 console.log(Math.round(5.95), Math.round(5.5), Math.round(5.05));
5 // expected output: 6 6 5
6
7 console.log(Math.round(-5.05), Math.round(-5.5), Math.round(-5.95));
8 // expected output: -5 -5 -6
9
```

Run ›

Reset

Syntax

Math.round()(*x*)

Parameters

x

A number.

Return value

The value of *x* rounded to the nearest integer.

Description

If the fractional portion of the argument is greater than 0.5, the argument is rounded to the integer with the next higher absolute value. If it is less than 0.5, the argument is rounded to the integer with the lower absolute value. If the fractional portion is exactly 0.5, the argument is rounded to the next integer in the direction of $+\infty$.

Note: This differs from many languages' **round()** functions, which often round half-increments *away from zero*, giving a different result in the case of negative numbers with a fractional part of exactly 0.5.
