

Node.hasChildNodes()

The `hasChildNodes()` method of the [Node](#) interface returns a boolean value indicating whether the given [Node](#) has [child nodes](#) or not.

Syntax

```
hasChildNodes()
```

Parameters

None.

Return value

A boolean value that is `true` if the node has child nodes, and `false` otherwise.

Example

```
let foo = document.getElementById('foo');

if (foo.hasChildNodes()) {
  // Do something with 'foo.childNodes'
}
```

Specifications

Specification
DOM Standard # ref-for-dom-node-haschildnodes ⁽¹⁾
