String.prototype.endsWith()

The **endsWith()** method determines whether a string ends with the characters of a specified string, returning **true** or **false** as appropriate.

Try it

JavaScript Demo: String.endsWith()

```
1 const str1 = 'Cats are the best!';
2
3 console.log(str1.endsWith('best!'));
4 // expected output: true
5
6 console.log(str1.endsWith('best', 17));
7 // expected output: true
8
9 const str2 = 'Is this a question?';
10
11 console.log(str2.endsWith('question'));
12 // expected output: false
13
```

Run ›

Reset

Syntax

endsWith(searchString)

endsWith(searchString, endPosition)

Parameters

searchString

The characters to be searched for at the end of **str**. Cannot be a regex.

endPosition Optional

The end position at which **searchString** is expected to be found (the index of **searchString**'s last character plus 1). Defaults to **str.length**.

Return value

true if the given characters are found at the end of the string; otherwise, **false**.
